

DJI AeroScope Offline Update Guide

The firmware version of DJI AeroScope Stationary Unit and DJI AeroScope Mobile can be updated using a special version of DJI Assistant 2 for AeroScope. Follow the instructions below to update the firmware using DJI Assistant 2.

1. Go to the official DJI Download page of AeroScope and download the latest offline firmware package on your computer.

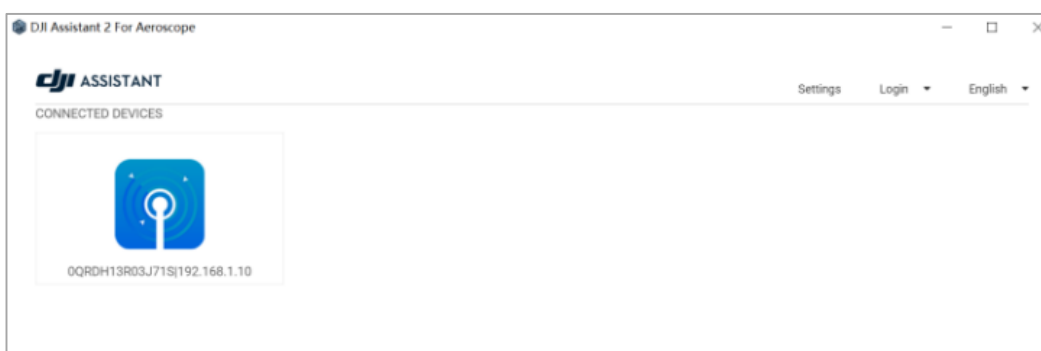

Link: <https://www.dji.com/downloads/products/aeroscope>

2. Go to the link below and download the DJI Assistant 2 for AeroScope software package on your computer.

Link: <https://pan-sec.djicorp.com/s/Yc52tacxxXBZQaw>

⚠ The official version of DJI Assistant 2 for AeroScope on DJI website does not support the offline firmware update.

3. Install and run DJI Assistant 2 for AeroScope on your computer.
4. Connect your computer and the AeroScope unit using an Ethernet cable. The corresponding device icon of the AeroScope unit will be displayed when connected. If the assistant software cannot recognize the AeroScope unit, restart your computer, disable the wireless network, and close the firewall software before running the assistant software again.

5. Select the device icon and click on Offline Upgrade. Select the downloaded offline firmware package in step one, and click Start Upgrade to update.

6. When the firmware is updated successfully a prompt will appear, confirming the update is completed. If the update fails, restart DJI Assistant 2 for AeroScope and try again.
