DJI Focus Release Notes

Date :	2015.12.03
Follow Focus Motor Firmware :	V 1.4
Follow Focus Motor Radio Firmware :	V 1.10
Follow Focus Remote Firmware :	V 1.4
Follow Focus Remote Radio Firmware :	V 1.9
PC Assistant :	V 2.1
Mac Assistant :	V 2.1
User Manual :	V 1.2

What is New?

- Added aperture control for the Zenmuse X5 series gimbal and camera. Ensure you have the latest versions of the DJI GO app (iOS v2.4.2 or Android v2.4.2) and Inspire 1 Pro remote controller firmware (v1.5.70) installed.
- Added a shortcut for auto calibration.
- Added a function to record motor calibration so that the motor can use the previous settings prior to powering off.
- Fixed the quick focus so that it responds precisely after you change the motor 's direction.
- Optimized the remote controller 's UI. After powering on, the remote controller displays information from the last device connected to it.
- The previous quick focus settings will be cleared when the DJI Focus is used to control other devices.
- Improved communication stability between the remote controller and motor.
- Added a reminder for manual-remote calibration so that the motor doesn't stall when it reaches the mechanical limit.
- Fixed issues related to manual calibration so that you can redo manual calibration after you suspend it.
