The default flight control is known as Mode 2. The left stick controls the aircraft's altitude and heading, while the right stick controls its forward, backward, left and right movements. The gimbal dial controls the camera's tilt.

The DJI PHANTOM 4 Pro+ V2.0 is a smart prosumer flying camera capable of shooting 4K video at 60 fps and at up to 100 Mbps, and capturing 20 megapixel stills. 4 directions of obstacle avoidance allow it to intelligently avoid obstacles during flight. Using TapFly and ActiveTrack through the DJI GO app, you can fly anywhere visible on your screen or track a moving subject smoothly and easily with a simple tap. The camera uses a 1-inch CMOS sensor offering unprecedented clarity, lower noise, and better quality images.

In addition to the above features, improved propulsion system efficiency means aircraft noise is 4dB (60%) lower than on the Phantom 4 Pro+ V2.0.

The powerful remote controller of the Phantom 4 Pro+ V2.0 has a transmission range extending up to 4.3 mi (7 km)*. It features physical buttons and dials to control exposure, camera tilt, photo capture, and video recording. Built into the remote controller is DJI's latest long-range transmission technology OCUSYNC, providing a live HD view from the Phantom's camera directly on the display. Dual frequency support makes the HD video downlink more stable.

* The remote controller is able to reach its maximum transmission distance (FCC) in a wide open area with no Electro-Magnetic Interference, and at an altitude of about 400 feet (120 meters).

1. Watch the Tutorial Videos

Watch the tutorial videos at www.dji.com or in the DJI GO 4 app.

2. Check the Battery Levels

Press once to check the battery level. Press once, then again and hold to turn on/off.

3. Charge the Batteries

Remove the battery. Charge Time: ~1 hr 20 min

Charge Time: ~2 hr 50 min

⚠️ When charging is complete, the battery level indicators will automatically turn off.
4. Prepare the Remote Controller

Unfold

Power on the remote controller and complete first-time setup in DJI GO 4 and tap GO FLY.

5. Prepare for Takeoff

Remove the gimbal clamp from the camera.

Press the propeller down onto the mounting plate and rotate in the lock direction until secure.

First-time activation requires your DJI account and internet connection.

Check that the propellers are secure before each flight.

Black propeller rings go on motors with black dots.

Silver propeller rings go on motors without black dots.
6. Flight

**Ready to Go (GPS)**

Before taking off, make sure the Aircraft Status Bar in the DJI GO 4 app indicates ‘Ready to Go (GPS)’ or ‘Ready to Go (Vision)’ if flying indoors.

In the DJI GO 4 App:

- **Auto Takeoff**
  The aircraft will take off and hover at an altitude of 4 feet (1.2 meters).

- **Auto Landing**
  The aircraft will land vertically and stop its motors.

- **Return-to-Home (RTH)**
  Bring the aircraft back to the Home Point. Tap again to stop the procedure.

- **Normal**
  You are in control of the Phantom, with satellite and Return-to-Home support.

- **TapFly**
  Tap on your screen to fly your Phantom in that direction, avoiding obstacles as it flies.

- **ActiveTrack**
  Mark an object on your screen to track it as it moves.

- **Manual Takeoff**
  Combination Stick Command to start/stop the motors
  Left stick up (slowly) to take off

- **Manual Landing**
  Left stick down (slowly) until you touch the ground
  Hold a few seconds to stop the motors

- **Stop motor mid-flight**
  Pull the left stick to the bottom inside corner while simultaneously pressing the RTH button. Only stop motors mid-flight in emergency situations when doing so can reduce the risk of damage or injury. Refer to the user manual for details.

- **Important**
  It’s important to understand basic flight guidelines, for the safety of both you and those around you. Don’t forget to read the Disclaimer and Safety Guidelines.
