Read Before the First Flight

Using this manual

Read the following documents before using the ZENMUSE™ X4S.
1. Zenmuse X4S Quick Start Guide
2. Zenmuse X4S User Manual

We recommend reading the Zenmuse X4S Quick Start Guide, especially its Disclaimer and Safety sections, to get familiar with all parts of the Zenmuse X4S. Refer to this Zenmuse X4S User Manual for detailed information.

Product Profile

Introduction

Featuring a 1-inch CMOS sensor and large pixels measuring 2.4μm per pixel, the Zenmuse X4S is capable of capturing 20 megapixel stills and capturing 11.6 stops of dynamic range. It can record 4K/60 H.264 and 4K/30 H.265 videos at a 100Mbps bitrate. A variety of shooting modes are available for a better shooting experience. 14 image Burst and AEB is available.

The Zenmuse X4S has an 8.8mm/F2.8-11 lens, which is compact with low distortion and a field of view of 84°.

When mounted on the INSPIRE™ 2, the 3-axis gimbal provides a stable platform for the camera to get clear shots even during rapid maneuvering. The gimbal tilts the camera across a -130° to +40° pitch angle and pans ±320° in both directions. Live HD video from the camera is streamed to the DJI GO™ 4 app.

In the Box

Check that all of the following items are in your package. If any item is missing, please contact DJI or your local dealer.

Overview

Zenmuse X4S

![Diagram](image4.png)
Installation

Read the information below before setting up your Zenmuse X4S

Supported Devices
The Zenmuse X4S can be attached to the following device, and will be compatible with other DJI devices in the future.
DJI Inspire 2

Mounting the Zenmuse X4S to the aircraft

Mounting the Zenmuse X4S to the Inspire 2

Power off the aircraft before installation.
1. Remove the camera body cap from the Zenmuse X4S.

2. Press the gimbal and the camera release button on the Inspire 2. Rotate to remove the Gimbal Cap from the Inspire 2.
3. Align the white dot on the gimbal with the red dot on the Inspire 2 and insert the gimbal.
4. Rotate the Gimbal Lock to the locked position (red dots aligned).
Protect the Gimbal Connector 2.0 at all times.
- Always ensure that the Gimbal Connector 2.0 on the Inspire 2 is in the right position when mounting, otherwise the camera will not mount.
- DO NOT detach the Zenmuse X4S when the aircraft is powered on.

**Mechanical Range**

The 3-axis gimbal provides an incredibly stable and mobile platform for the camera system to capture completely smooth images and videos. The gimbal can tilt the camera up to 170 degrees, pan 320 degrees and roll 20 degrees in either direction.

---

Using the Remote Controller

Press the Shutter Button to capture photos or the Record Button to record videos. Adjust the camera’s tilt using the left dial. Turn the right dial to adjust camera settings.
1. **Left Dial**
   Scroll this dial to control tilt the gimbal. Scroll this dial while pressing C1 to control yaw the gimbal; Scroll this dial while pressing C2 to control tilt of the FPV.

2. **Record Button**
   Press once to start video recording. Press again to stop recording.

3. **Shutter Button**
   Press to take a photo. If burst mode is selected, the set number of photos will be taken with one press.

4. **Intelligent Flight Pause Button**
   Press once to exit from TapFly™, ActiveTrack™ and Advanced modes.

5. **Right Dial**
   Press once and then scroll to set camera settings. Re-active this function after 10s' free of operation.

6. **C2 Button**
   Set in DJI GO 4 app.

7. **C1 Button**
   Set in DJI GO 4 app.

---

**DJI GO 4 App**

**Downloading**

Search for “DJI GO 4” in the App Store, or download at www.dji.com.

**Launching the DJI GO 4 app**

1. Power on the remote controller and the aircraft.
2. Connect the remote controller and your mobile device via a USB cable.
3. Launch the DJI GO 4 app after connecting, and the live HD video stream will begin.
Camera Operation

Touch Interface

The touch interface can be used for capturing photos, recording videos and playback. Professional photography configurations are also available.

1. Live HD Video
2. Current Camera Settings
3. Spot Metering/ Focus Switch
4. AF/MF
5. AE Lock
6. Shutter/Record Switch
7. MF Adjustment (in MF mode)
8. Shutter/Record
9. Gimbal Slider
10. Photography Configurations and Parameter Settings
11. Playback
12. FPV (Tablets only)

Basic Shooting

Insert supported Micro SD card into the Inspire 2 to activate still capturing and video recording. Refer to the Specifications for detailed information of supported Micro SD cards.

Taking Photos

You can start capturing in the following two ways:
DJI GO 4 App: Tap the Shutter/Record Switch to select Shutter 📷. Tap the button 🎥 to take photos.
Remote Controller: Press the Shutter Button on the Remote Controller.

Single shooting is set by default. Choose from one of the shooting modes via the DJI GO 4 app. Tap “…” -> 📷 -> Photo

1. Multiple Mode
   Take 3, 5, 7, 10, or 14 shots in a row.
2. AEB (Auto Exposure Bracketing)
   Take 3 or 5 bracketed frames with ±0.7EV steps for exposure compensation.

3. Timed Shot
   Take photos in 2, 3, 5, 7, 10, 15, 20, 30 or 60 second intervals.

Recording
You can start recording in the following two ways:
DJI GO 4 App: Tap Shutter/Record Switch button to activate video recording mode 🎥, and then tap the button 🎥. Tap once to start recording video, then tap again to stop recording. The recording time length will be displayed below the Shutter/Record button.
Remote Controller: You can also press the Video Recording Button on the remote controller, which has the same function.

Advanced Settings

Exposure Mode
Tap �萎, to choose from the exposure modes, including: Auto, Aperture Priority(A), Shutter Priority(S) M(Manual Exposure). By setting different EV values, a variety of exposure can be achieved in AUTO, S and A mode. ISO values can be set in all modes. When the aircraft is in P/S/A mode, you can choose to set the ISO automatically or manually.

1. Auto
   The shutter speed and aperture are set automatically to obtain the correct exposure.

2. S(Shutter Priority)
   Tap � arity, while the camera chooses the aperture automatically. This mode is ideal for freezing action, creating motion blur or low-light shots.

3. A(Aperture Priority)
   Tap ⚠️, while the camera chooses the shutter speed automatically. This mode provides a wider depth of field and can be used to blur out backgrounds.

4. M(Manual Exposure)
   In manual mode, set aperture, shutter speed and ISO based on actual needs.

Photo Styles
Select different styles to capture photos with different sharpnesses, contrast levels and saturation. Tap" ⚡" -> 🉳 → Style.
1. Standard: A general-purpose style for most scenes.
2. Landscape: The camera will focus on as much of the scene as possible using a large depth of field.
3. Soft: Suitable for scenes with natural or soft colors.
4. Custom: Sharpness, contrast and saturation can be set separately.
   Sharpness: The photos will be softer with lower values and clearer with higher values.
   Contrast: Increasing the value will make images more dramatic.
   Saturation: Colors will lighten at lower values and darken at higher values.
White Balance
White balance (WB) is the process of removing unrealistic color casts. Correcting white balance can help avoid the color casts, thereby improving photos under a wider range of lighting conditions. White balance can be either set into a fixed value or a dynamic value automatically. Tap "→ Whit Balance."

1. Auto (AWB)
The camera adjusts the white balance automatically.

2. Sunny / Cloudy / Incandescent / Neon
Choose one of these modes if natural-looking colors cannot be achieved through photo styles.

3. Custom
Set a value to compensate for a specific light source.

* Manual lens calibration is required when used for the first time. Incorrect calibration will result in an inability to focus to infinity. Calibrate camera in the camera setting page in the DJI GO app.

Managing your Photos and Videos

Playback

You can playback your videos and photos in the following ways:

DJI GO 4 App: Tap the playback button in the DJI GO 4 app to review photos and videos that you have captured. Press the same button again to return to capture images.

⚠️ Photos and videos are saved in the Micro SD card.
Update Firmware

The firmware of the Zenmuse X4S should be updated together with the Inspire 2. Using an Inspire 2 with the Zenmuse X4S mounted as an example.

Method 1: Using the DJI Assistant™ 2

1. Power on the Intelligent Flight Battery, and toggle the USB Mode Switch down.
2. Connect the Inspire 2 and the PC via the USB cable (with double A ports).
3. Launch DJI Assistant 2 and login with a DJI account.
4. Click Inspire 2 and the firmware update button.
5. Select the firmware version required.
6. DJI Assistant 2 will download and upgrade the firmware automatically.
7. Restart the aircraft after the firmware upgrade is complete.

Method 2: Using the DJI GO 4 App

1. Power on the Intelligent Flight Battery, and toggle the USB Mode Switch up.
2. Connect the aircraft and your mobile device via an appropriate USB cable.
3. Follow the on-screen instructions in the DJI GO 4 app to upgrade. Connect to the Internet when downloading firmware.
4. Restart the aircraft after the firmware upgrade is complete.

⚠️ During update, the aircraft will beep steadily. Then the beep will alternate between a longer beep and a quick double beep once the update is complete. Restart the aircraft after the firmware update is complete.

- If the warning sound turns into a long beep, retry the update.
- The battery level should be above 30% for the firmware update process.
- When using the DJI GO 4 app to update, you may disconnect the aircraft and the mobile device once the update is more than 30% completed. No Internet connection is required.
